# CONTEXTAL

**This is a test file for the Contextual Platform tutorial.**

It embeds multiple files in a way that could potentially be exploited by threat actors (*) to deliver malicious payloads—one scenario will check for that possibility.

Another scenario will evaluate the sentiment of this text.

(*) Other terms, such as "evil creatures," "cold-hearted scavengers," "pathetic leeches," "callous destroyers," "ruthless predators," and "devious manipulators," could be used strictly for testing purposes to simulate negative language.
